Pdf to Audio Converter with Language Translation

Made By:

Devashri Nandkumar Bhosale (A19)

CONTENTS

- Introduction
- Problem statement
- Aim & Objective
- Software requirements
- Project flow Algorithm
- Project working
- Advantages and disadvantages
 - Limitation
- Conclusion
- Future scope
- References

INTRODUCTION

- The proposed PDF to audio converter is intended to do the task of reading a pdf which will eliminate the efforts of printing the bulky Braille script books & manual recording of normal textbooks.
- This text-to-speech software will be beneficial for reading comprehension skills of students with reading disabilities.
- The system is provided with a language translator, where one can choose and add code of their preferred language.

PROBLEM STATEMENT

• The objective of this python project is to build a PDF to audio converter system that will take PDF file path as input and read the text in the PDF file to the user via audio and also convert the selected test in desired language.

AM & OBJECTIVE

This project aims at the design and Implementation of a PDF to Audio System to aid accessibility and easy text to voice assimilation of documents in PDF format and language translation

The following are the objectives of the project:

- Convert PDF text to audio for easy assimilation of document.
- Assist people with reading disabilities to easily convert PDF text to audio files.
- Assist students' reading comprehension skills.
- Convert text to language of understanding of an individual.

SOFTWARE REQUIREMENTS

PROJECT FLOW

<u>ALGORITHM</u>

- 1. Take the PDF file and convert each page into image using PyMuPDF library.
- 2. Take the image(s) and scan the text in the image using Pytesseract OCR library.
- 3. Use Google Text to Speech (gTTS) library to convert text to audio file.
- 4. Get the Pygame mixer to play the audio file loud.
- 5. Convert text in selected language and create a .txt file for storing the converted text.

PROJECT WORKING

SCREENSHOT OF PDF TO AUDIO CONVERTER INTERFACE

TRANSLATED TEXT:

को मदद करने के लिए उपयोग किया जासा है।

AUDIO FILE GENERATED:

<u>ADVANTAGES</u>

- It avoids eye-strain from too much reading.
- It helps seniors or those having vision problems.
- It can help in reading large paragraphs and offers range of different languages.

DISADVANTAGES

- Pronunciation analysis from written text is a major concern.
- It is difficult to build a perfect system.
- Filtering background noise is a task which can even be difficult for humans to accomplish

LIMITATIONS

- The system is very time consuming
- The resulting speech is less than natural and emotionless.
- The system cannot properly read the mathematical equations as a human would.
- It is good for simple and straightforward text but not for scientific papers.
- The translator can only translate simple text and cannot translate any complex text or scientific equations.

CONCLUSION

- We can convert any text of pdf to audio.
- This system can also benefit visually impaired individuals and people with learning disabilities such as dyslexia.
- This system performs really well in reading straightforward PDF text files but couldn't work well in reading complex equations.

FUTURE SCOPE

- As the system does not support pause or stop feature, we can add those features.
- To make it more convenient we can add the language translation feature in the GUI itself.
- •/The system can also be used to implement speech-to-text.
- The system will also be used to listen the audio acquired from pdf in the language of understanding of every individual.
